Job Description

Phlebotomists usually work under the direction of a lead phlebotomist or medical technologist. The phlebotomist collects blood specimens for analysis, checks the quality of the sample, and assumes responsibility for the safety and comfort of patients during the procedure. The phlebotomist must have sufficient venipuncture skills to collect blood from infants, children, adults, and the elderly or “hard to stick” patients. They must also be able to accurately perform skin punctures, blood culture collection, and other special laboratory tests. They may also have responsibilities in specimen handling and processing. Phlebotomists must have computer skills, communication skills, and an understanding of medico-legal implications. The job market for phlebotomists is excellent with many jobs available on various shifts in reference and hospital laboratories.
